Supplement to the Advisory

In the second full paragraph of page 3, applicant states that Hashimoto does not contain an image enhancing process because the condition set command is for setting conditions of the scanner. For applicant's argument to be true it is assumed that the scanner or the scanning control program cannot contain an image enhancing process. The examiner does not agree with this logic. Furthermore, applicant has not supplied a reason why a scanner or the scanner control program could not be responsible for performing an image enhanced process, such as resolution conversion.

In the third paragraph of page 3, applicant argues a different between a final image and enhancing an image that will become the final image. The examiner does not appreciate the difference. Moreover, final image or a processing of an image to make it final is not specifically set forth in the claim.

Applicant should clearly take note of the image enhancing feature which is resolution enhancement.
